

## **Information on Trainee Salaries for Veterinary Residents in the United States March 2025**

Responses to the Frequently Asked Questions by the  
National Prevailing Wage and Helpdesk Center

### **1. Full name of the published survey:**

2025 Academic Residency Salaries Offered Through the VIRMP

### **2. Survey Schedule:**

The data is collected annually in September by the Veterinary Internship and Residency Matching Program (VIRMP), a program created and managed by the American Association of Veterinary Clinicians (AAVC).

### **3. When was the data collected?**

The data presented by the AAVMC was collected by the Veterinary Internship and Residency Match Program (VIRMP) between September 1, 2024 and October 1, 2024. The final report was released in March 2025. The data represents salary offers for residency training positions at academic institutions made during the 2025-2026 fiscal year for positions starting in 2025.

### **4. How was the sample size determined?**

Training sites voluntarily participate in the VIRMP; however, the survey is the most comprehensive data available for the academic residency training landscape. In the 2025-2026 match year, a total of 61 academic institutions offered 402 residency training positions through the VIRMP.

### **5. How are the positions defined?**

Non-Clinical residents are defined as individuals involved in basic science training programs. Clinical residents are defined as individuals involved in a three-year advanced training program in a specialty area in veterinary medicine. This training may or may not lead to a specialty board certification and may or may not be embedded within a graduate program.

### **6. How were the participants selected?**

Accredited academic institutions are eligible to participate in the VIRMP. Information on the specific participating academic institutions is included in the AAVMC report.

**7. The number of employers surveyed in the area?**

A total of 61 employers offering 402 residency training programs at accredited academic institutions in the US are included in the data set.

**8. The number of wage value responses (employees) in the area?**

Participating academic institutions reported position and salary offers for each job title. A total of 402 veterinary resident position offers were listed in the VIRMP. Salaries at academic institutions are not negotiable.

**9. A list of employer participants or explanation of how the cross-industry nature of the survey was maintained?**

The VIRMP collects and reports the data through a portal used by academic institutions to submit open training/employment offers. The program features position offers throughout the United States and Canada; the positions offered cover more than 24 veterinary practice types. A list of participating academic institutions is provided in Appendix 1.

**10. How was the presented wage determined and whether it is a mean or median?**

After receiving the data from the VIRMP, staff at AAVMC use the raw salary data to calculate mean and median salaries offered to prospective residents using SPSS. Weighted means and medians were also calculated for each position by specialty category.

A summary report will be published on the AAVMC's website.

**11. The area covered by the survey or relevant portion thereof and an explanation of any expansion of the area beyond the normal commuting distance, when applicable?**

Veterinary resident positions at academic institutions are filled through the VIRMP. While the match program does not fill all advance training positions in the US, it is believed that the majority of positions are filled through VIRMP. The national data presented in the summary produced by the AAVMC is the most comprehensive data available for academic residency trainee populations in the United States.
